

break语句可用于所有循环，用来结束break所在的循环。

练习：用break语句结束循环

```
while True:
```

```
    a = input("please input a number ('q' or 'Q' to exit) :")
```

```
    if a == 'q' or a == 'Q':
```

```
        break
```

```
    a = float(a)
```

```
    print("{0:.2f}".format(a))
```
