

nonlocal: (函数内使用(修改)外部的局部变量)

global: (函数内使用全局变量)

声明一下再使用(注意: 声明的时候不能赋值)

```
a = 100
```

```
def f1():
```

```
    b = 10
```

```
    def f2():
```

```
        nonlocal b
```

```
        b = 20
```

```
    global a
```

```
    a = 200
```

```
    f2()
```

```
    print(b)
```

```
f1()
```

```
print(a)
```
